

## **Why should we champion decarbonisation of the economy?**

Climate change is the greatest environmental and social challenge the world has ever faced. For a long time, Hamish Chamberlayne, Head of Global Sustainable Equities, has expressed the need for companies to transition to a low-carbon economic model in order to address the mounting list of problems associated with climate change. In this presentation, Hamish discusses how managing a low carbon portfolio can positively impact the environment and society.

**Hamish Chamberlayne and his team were awarded this year's Voxia Swiss Sustainable Funds Award in the Best World Equities category for their Janus Henderson Global Sustainable Equity Fund.**

### **Hamish Chamberlayne**

Hamish Chamberlayne is Head of Global Sustainable Equities at Janus Henderson Investors. He is also Portfolio Manager of the Janus Henderson Global Sustainable Equity and Institutional Global Responsible Managed strategies, a role he has had since 2013. He was an investment manager with the firm from 2012. Hamish joined Henderson as an investment analyst in 2011 from Gartmore, where he was an equity analyst with the global equity team. Prior to this, from 2004 to 2007 he worked as a senior auditor at PricewaterhouseCoopers, where he covered a variety of sectors, including energy, technology, and communications. He began his career at Burlington Consultants in 2003 performing commercial due diligence on businesses identified as acquisition targets by private equity houses. Hamish graduated with a master's degree in chemistry from New College, Oxford University. He holds the Chartered Financial Analyst designation and is a qualified accountant. He has 18 years of financial industry experience.
